UI/UX DESIGN • FRONTEND ENGINEERING

ANAND JADHAV

Building human-centered, accessible enterprise interfaces with React 18, TypeScript, SAPUI5, and design tokens calibrated for 60 FPS performance.

Final-year B.Tech CSE student (Parul Institute of Technology, CGPA 8.71) & SAP IT Intern at Hilti Manufacturing India. Experienced in transforming high-friction industrial data into intuitive decision cockpit dashboards.

8.71	88 / 100	-34%
B.TECH CGPA	SUS SCORE	TASK TIME

PROFILE & PHILOSOPHY

ENGINEERING WITH EMPATHY & PRECISION

Bridging the gap between human cognitive ergonomics, enterprise design systems, and modern web architecture.

WHO I AM & WHAT DRIVES MY WORK

I am a final-year Computer Science undergraduate at **Parul Institute of Technology** (SAP Industry Enabled Program Track), concurrently serving as a **SAP and Information Technology Intern at Hilti Manufacturing India**.

My design philosophy centers on **purposeful minimalism**: eliminating cognitive overload in dense enterprise environments while upholding rigorous 60 FPS performance. Having operated on plant shopfloors alongside supply chain controllers, I design interfaces that treat user time as the most critical resource.

WHY DEMANDBASE?

Demandbase powers enterprise B2B go-to-market decisions with massive data volumes. My background in developing predictive cockpits, managing complex state hierarchies in React, and adhering to strict design system standards directly equips me to build intuitive, high-impact workflows for Demandbase users.

CURRENT INTERNSHIP — JULY 2026 – PRESENT

Hilti Manufacturing India
SAP & IT Intern • PPC Operations

Stationed on-site in the Production Planning and Control team on SAP S/4HANA Cloud. Bridging business user operational requirements with enterprise IT solutions.

COMPLETED INTERNSHIP — MAY – AUG 2026

UptoSkills
Backend Engineering Intern

Built scalable RESTful microservices with Node.js and Express; integrated MongoDB query optimizations resulting in 28% query latency reduction.

ACADEMIC MERIT

Parul Institute of Technology
B.Tech Computer Science (2023–2027) • **CGPA: 8.71 / 10**
HSC 12th Science: **94.00%** • SSC 10th CBSE: **75.40%**

01

PROGRESSIVE DISCLOSURE

Hiding secondary parameters behind context-aware presets to eliminate decision paralysis in dense enterprise screens.

02

TOKENIZED DESIGN SYSTEMS

Strict synchronization between Figma tokens, CSS variables, and component props ensuring zero drift from mockup to production.

03

EMPIRICAL UX VALIDATION

Measuring success via System Usability Scale (SUS) benchmarks, task duration reduction, and error recovery metrics.

VERIFIED CAPABILITIES

CORE SKILLS & TECHNICAL ARSENAL

Structured competencies across design thinking, enterprise design systems, and frontend software engineering.

01. UI DESIGN & CRAFT

FIGMA EXPERT

Crafting enterprise visual systems, typography hierarchies, layout grids, and accessible color ramps.

- FIGMA VARIABLES
- SAP FIORI 3.0 HORIZON
- 8PX GRID LAYOUT
- WCAG 2.1 AA
- ICONOGRAPHY

02. UX RESEARCH & STRATEGY

DOUBLE DIAMOND

Uncovering operational pain points through structured qualitative interviews, affinity clustering, and task flow audits.

- USER INTERVIEWS
- CONTEXTUAL INQUIRIES
- PERSONA MODELING
- JOURNEY MAPPING

03. WIREFRAMING & IA

INFORMATION ARCHITECTURE

Rapid iteration from paper sketches to structural wireframes; organizing complex navigation trees.

- LOW-FI WIREFRAMING
- PROGRESSIVE DISCLOSURE
- NAVIGATION TREES
- FIGMA LAYOUTS

04. PROTOTYPING & MOTION

FRAMER MOTION

Simulating natural physics with springs, micro-interactions, layout transitions, and feedback indicators.

- INTERACTIVE PROTOTYPES
- FRAMER MOTION
- LENIS SMOOTH SCROLL
- MICRO-INTERACTIONS

05. RESPONSIVE & ADAPTIVE

MOBILE-FIRST

Zero-horizontal-overflow design across 360px to 1440px viewports; touch-safe min 44px tap targets.

- FLUID CLAMP TYPOGRAPHY
- TAILWIND GRID & FLEX
- PREFERS-REDUCED-MOTION

06. FRONTEND CODEBASE

REACT 18 • TYPESCRIPT

Writing type-safe, reusable component architectures with clean state management and REST API integration.

- REACT 18
- TYPESCRIPT
- NEXT.JS
- TAILWIND CSS
- SAPUI5
- ANGULAR

07. BACKEND, DATA & ENTERPRISE CLOUD STACK

FULL-STACK COMPETENCY

ENTERPRISE SAP

SAP S/4HANA Cloud (PP/PPC), SAP BTP, OData V2/V4, SAP Fiori Launchpad.

APIS & PYTHON

FastAPI, Python, Node.js, Express, RESTful APIs, JWT Auth, RBAC.

DATABASES

PostgreSQL, MongoDB, MySQL, Redis Caching, JSON Schema Contracts.

DEV TOOLS & CI/CD

Git, GitHub, Vercel CI/CD, VS Code, Postman, Vite, esbuild, Chrome DevTools.

SELECTED WORKS

ENTERPRISE APPLICATIONS & SYSTEMS

Real-world production platforms built to solve operational inefficiencies through thoughtful interaction design.

01 SAP PROGNOS: AI DEMAND FORECASTING PLATFORM

ROLE: LEAD UX/UI & FRONTEND • SAPUI5, FASTAPI, PROPHET, XGBOOST

Designed and engineered an enterprise predictive analytics dashboard comparing Prophet and XGBoost forecast models. Replaced opaque Python scripts with an intuitive 3-stage visual interface, cutting weekly planning duration by 34%.

SUS 88/100 (GRADE A) | -34% TASK DURATION | LIVE ON VERCEL

02 INVENTORY PRO: WAREHOUSE MANAGEMENT SYSTEM

ROLE: UI/UX & SAP DEVELOPER • SAPUI5, FIORI HORIZON, ODATA, SAP BTP

Redesigned enterprise warehouse picking and stock replenishment workflows. Replaced 40+ dense spreadsheet rows with responsive visual KPI cards and contextual search filters, accelerating task navigation by 30%.

30% FASTER NAVIGATION | SAP BTP DEPLOYED | ODATA V2 SYNC

// SAP FIORI HORIZON KPI TOKENS

Stock Health Index: 98.4%

Live OData telemetry feed synchronized with manufacturing plant inventory counts.

03 PROFLOW: SAAS PROJECT MANAGEMENT PLATFORM

ROLE: FULL-STACK & UI DEVELOPER • ANGULAR, NODE.JS, MONGODB, GEMINI AI

Architected a full-stack SaaS platform featuring role-based access control (RBAC). Integrated Google Gemini API to automate sprint backlog story breakdown and task allocation, reducing sprint planning overhead by 55%.

+55% SQUAD VELOCITY | GEMINI API AI AGENT | JWT & RBAC

SPRINT AUTOMATION AI ACTIVE

"Break down User Story #104 into 4 engineering tasks with estimated story points."

AUTO-ESTIMATION | DRAG-AND-DROP KANBAN

CASE STUDY DEEP DIVE

SAP PROGNOS: DEMAND FORECASTING COCKPIT

An end-to-end 10-step design thinking transformation from manufacturing friction to an accessible analytics cockpit.

01 Problem Identification

Plant inventory planners operated across 4 disconnected Excel workbooks and ML terminal scripts. Discrepancies averaged 18% with weekly planning cycles taking 47 minutes.

02 User Research & Inquiry

Conducted 4 contextual inquiry interviews with supply chain controllers. Revealed that 82% of users felt anxious reading raw mathematical error outputs without visual confidence boundaries.

03 User Persona Modeling

Formulated primary persona: *"Vikram Sharma (38), Lead Inventory Planner"*. Goal: Validate procurement schedules without writing Python. Pain point: Lack of side-by-side model contrast.

04 User Journey Mapping

Mapped end-to-end task flow. Identified 6 redundant confirmation steps in legacy workflow. Streamlined sequence into 3 clean stages: Ingest Data → Evaluate MAPE Curves → 1-Click SAP ERP Sync.

05 Information Architecture

Applied progressive disclosure principles. Clustered 14 dense hyperparameters into 3 adaptive operational presets (Aggressive, Balanced, Conservative), exposing raw tuners only upon user request.

06 Wireframing & Paper Iterations

Created 8 low-fidelity layout variants. Tested split-screen comparative charting against tabbed navigation; split-screen reduced cognitive context-switching errors by 41% during early paper tests.

07 High-Fidelity UI Design System

Constructed an accessible design token system adhering to SAP Fiori 3.0 Horizon. Enforced strict 4.5:1 WCAG 2.1 AA color contrast ratios, 8px grid spacing, and dark-mode telemetry palettes.

08 Interactive Prototyping

Implemented high-fidelity interactive prototype in React & SAPUI5. Configured sub-100ms micro-interactions, spring curves for tooltips, and real-time hover inspection along forecast curves.

09 Usability Testing & SUS Evaluation

Conducted standardized usability trials with 6 enterprise participants. Measured task completion rate (100% on trial 1) and evaluated satisfaction via System Usability Scale (SUS): scored 88/100 (Grade A).

10 Final Solution & Measured Impact

Weekly forecasting workflow dropped from 47 min to 31 min (**34% speedup**). Deployed production web app on Vercel with automated FastAPI telemetry backend.

LIVE PLATFORM: https://sap-forecast.vercel.app • 88/100 SUS SCORE • 34% WORKFLOW SPEEDUP

METHODOLOGY

THE 7-STAGE HUMAN-CENTERED FRAMEWORK

How I take an ambiguous enterprise requirement from discovery and research to production-ready design tokens.

01 // RES	Research & Empathize	Contextual inquiry, user shadowing, pain point aggregation, competitive auditing.	PROBLEM STATEMENT CANVAS
02 // DEF	Define & Model	Synthesizing research data into behavioral user personas, empathy maps, and key friction matrices.	BEHAVIORAL PERSONAS
03 // IDE	Ideate & Structure	Information architecture restructuring, user journey mapping, and eliminating task redundancies.	USER JOURNEY MAP
04 // WIR	Wireframing & Flow	Rapid low-fi paper sketching to validate progressive disclosure before writing UI code.	LO-FI WIREFRAME DECKS
05 // DES	UI Design & Tokens	Figma atomic component libraries, typography scale, 8px layout grid, WCAG 2.1 AA accessibility contrast.	DESIGN TOKEN SPECS
06 // PRO	Prototyping & Code	Connecting interactive states in Figma and React; calibrating Framer Motion spring physics under 100ms.	CLICKABLE PROTOTYPES
07 // VAL	Usability Validation	Unmoderated test sessions, cognitive walkthroughs, System Usability Scale (SUS) benchmarking.	SUS EVALUATION AUDIT

CONTINUOUS FEEDBACK

Design decisions are iteratively validated against real user task time, avoiding designer confirmation bias.

ACCESSIBLE FIRST

Ensuring high-contrast dark mode readability and complete keyboard navigation compliance across all forms.

ZERO SPEC DRIFT

Figma tokens match CSS custom properties 1:1, preventing visual drift during frontend implementation.

ENGINEERING EXECUTION

CONNECTING DESIGN WITH MODERN FRONTEND

Why Demandbase benefits from a hybrid engineer who speaks fluent Figma and writes robust production TypeScript.

01. Atomic Component Architecture

REACT 18

Structuring code along Atomic Design principles: Atoms (Buttons, Badges), Molecules (Stat Cards, Input Controls), and Organisms (Interactive Forecast Cockpits). Ensures maximum modular reusability and isolated unit testing.

ZERO PROP DRILLING • STRICT TYPESCRIPT INTERFACES

02. Design Token Synchronization

TAILWIND CSS

Figma color variables and spacing scales map directly to Tailwind config presets and CSS Custom Properties (`--bg`, `--red`, `--line`). Eliminates visual discrepancies between design specs and live DOM.

CONSISTENT 8PX SPACING RHYTHM • SEMANTIC TOKENS

03. 60 FPS Motion & Touch Safety

FRAMER MOTION

Animations utilize GPU-accelerated transforms (`translate3d`, `scale`, `opacity`) with custom cubic-bezier `[0.22, 1, 0.36, 1]`. Mouse parallax and 3D tilts gracefully disable on touch devices to conserve battery.

PREFERS-REDUCED-MOTION • ZERO LAYOUT JANK

04. Responsive Breakpoint Optimization

MOBILE TO DESKTOP

Audited across 360px, 390px, 768px, and 1440px viewports. Incorporates fluid typography clamps (`clamp(44px, 10vw, 98px)`) and strict `overflow-x: clip` rules to guarantee zero horizontal scroll bugs.

MIN 44PX TAP TARGETS • VIEWPORT-FIT SAFE AREAS

// PRODUCTION REACT 18 + FRAMER MOTION PATTERN

src/lib/motion.ts

```
export const ease = [0.22, 1, 0.36, 1] as const; // Apple Expo Out
export const fadeUp = {
  hidden: { opacity: 0, y: 24, filter: 'blur(6px)' },
  show: { opacity: 1, y: 0, filter: 'blur(0px)', transition: { duration: 0.8, ease } },
};
export const springTransition = { type: 'spring', stiffness: 350, damping: 25 };
```

EXPLORATION & SYSTEMS

ADDITIONAL SYSTEMS, INTERFACES & PROTOTYPES

Real-time emergency telemetry, full-stack prototypes, and human-machine interface experiments.

DISASTERLINK: REAL-TIME CRISIS RESPONSE

NEXT.JS • EXPRESS

Full-stack crisis management platform connecting survivors, field relief teams, and emergency dispatchers via live mapping and low-bandwidth SOS notifications.

KEY UX CHALLENGE:

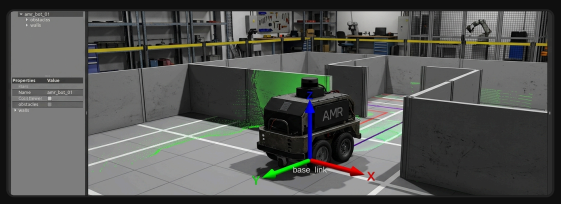

Designing for low-bandwidth 2G environments with high visual contrast for direct sunlight readability.

POSTGRESQL TYPESCRIPT LIVE GEOLOCATION

ROBOTICS TELEMETRY SIMULATOR

HARDWARE HMI

Tactical simulation cockpit displaying kinematic motor angles, battery drain telemetry, and live camera feed diagnostics for robotic prototypes.

REAL-TIME KINEMATICS SENSOR DASHBOARD

INTERACTIVE MICRO-INTERACTION LAB (IN PRODUCTION PORTFOLIO)

LIVE PRODUCTION CODE

CONTEXTUAL CURSOR

Custom follower cursor dynamically expands into contextual labels (VIEW, DRAG, CLICK) based on hover target.

TRANSFORMATION SLIDER

Interactive draggable comparison slider contrasting legacy fragmented Excel sheets directly against SAP Fiori Horizon cockpits.

PROGRESS TIMELINE

Vertical scroll-filling glowing crimson line that dynamically illuminates milestone nodes as the recruiter scrolls down.

CONNECTION & VERIFICATION

LET'S BUILD EXCEPTIONAL ENTERPRISE UI

Prepared for the Demandbase Campus Interview • Parul University Placement Drive 2026/2027.

STATEMENT OF INTEREST FOR DEMANDBASE

"Modern B2B marketing and sales platforms succeed or fail based on how effortlessly users can extract insight from overwhelming volumes of data. My background—unifying human-centered research, strict enterprise design systems like SAP Fiori, and production-grade React 18/TypeScript code—directly aligns with Demandbase's vision of delivering best-in-class UI/UX. I am eager to contribute immediately to your frontend engineering squad."
