UI/UX DESIGN • FRONTEND ARCHITECTURE

ANAND JADHAV

Designing and engineering high-impact, accessible enterprise interfaces. Bridging human-centered research, SAP Fiori design systems, and modern React 18 / TypeScript architecture.

Final-year B.Tech Computer Science student at Parul Institute of Technology (SAP IEP Track) & SAP IT Intern at Hilti Manufacturing India. Specializing in simplifying dense tabular data into intuitive decision cockpits.

CURRENT ROLE
Hilti Manufacturing India
SAP S/4HANA Cloud (PPC)

UX OUTCOME
-30% Task Time
Warehouse Navigation Redesign

VERIFIED LIVE DEMO
SAP Prognos Platform
Deployed on Vercel

JOURNEY & VALUES

THE DESIGNER WHO UNDERSTANDS CODE

Combining shopfloor industrial empathy with modern component-driven frontend architecture.

DESIGN PHILOSOPHY

Enterprise software handles dense data, but it should never feel punitive. I design with **progressive disclosure**—shielding users from cognitive overload by surfacing critical telemetry first, with depth available on demand.

My strength is serving as the **uncompromising bridge** between design and engineering: translating Figma autolayout tokens into production React 18 code with zero visual drift.

> **"Good design in B2B is invisible efficiency."**
> Focused on task duration & error recovery

VISUAL EXPERIENCE TIMELINE

Hilti Manufacturing India — JUL 2026 – PRESENT
SAP and IT Intern • PPC Operations
Support Production Planning on SAP S/4HANA Cloud at Vadodara plant; analyze operational workflows with business users.

UptoSkills — MAY – AUG 2026
Backend Developer Intern • Remote
Engineered REST APIs with Node.js, Express, and MongoDB; reduced query latency by 28%.

Parul Institute of Technology — 2023 – 2027
B.Tech Computer Science (SAP IEP Track)
Built SAP Prognos & Inventory Pro, cutting task navigation by 30%.

EDUCATION & CERTIFICATIONS

B.Tech Computer Science
Parul University (2023–2027)

HSC 12th Science: 94.67%
Dayanand Science College, Latur (2021)

SSC 10th CBSE: 75.40%
Yashwant International School (2019)

KEY CERTIFICATIONS

- SAP Certified Associate: ABAP Cloud (2025)
- Oracle Cloud Infrastructure AI Foundations
- HackerRank Frontend Developer (React)

TOOLKIT & CRAFT

VISUAL CAPABILITY & TOOLCHAIN

Organized across design strategy, accessible UI component systems, and production frontend engineering.

01 // UI DESIGN

FIGMA EXPERT

Constructing tokenized component libraries, typography ramps, and WCAG 2.1 AA accessible color systems.

FIGMA VARIABLES | SAP FIORI 3.0 | 8PX LAYOUT GRID | WCAG 2.1 AA

02 // UX RESEARCH

EMPATHY DRIVEN

Uncovering operational friction via contextual interviews, user persona formulation, and task mapping.

USER INTERVIEWS | CONTEXTUAL INQUIRIES | PERSONAS | JOURNEY MAPS

03 // WIREFRAMING & IA

STRUCTURE

Progressive disclosure layouts; transforming dense tables into intuitive decision trees and card views.

PAPER WIREFRAMES | LO-FI MOCKUPS | TASK TREES | PROGRESSIVE DISCLOSURE

04 // MOTION & PROTO

60 FPS

Calibrated spring transitions, micro-interactions, and cursor feedback under 100ms response time.

FRAMER MOTION | LENIS SCROLL | MICRO-INTERACTIONS | SPRING PHYSICS

05 // FRONTEND DEV

REACT 18 • TS

Writing type-safe, reusable component architectures in React 18, TypeScript, Tailwind CSS, and SAPUI5.

REACT.JS | TYPESCRIPT | TAILWIND CSS | SAPUI5 | NEXT.JS

06 // DATA & APIS

FULL-STACK

Connecting UI controls with high-speed APIs, Python telemetry backends, and SAP S/4HANA Cloud systems.

FASTAPI | PYTHON | REST APIS | POSTGRESQL | SAP S/4HANA

DESIGN SYSTEM TOKENS:

FONTS: ANTON (DISPLAY) • SPACE GROTESK (HEADINGS) • INTER (BODY) • JETBRAINS MONO (DATA)

SELECTED WORKS

PRODUCTION PLATFORMS WITH MEASURABLE IMPACT

Genuine software projects built, deployed, and verified with measurable task efficiency improvements.

01 // SAP PROGNOS

AI FORECASTING

SAPUI5 • FASTAPI • PROPHET • XGBOOST

Designed and built an enterprise predictive analytics platform comparing Prophet and XGBoost models. Replaced opaque Python terminal scripts with an intuitive 3-stage dashboard, cutting planning time by 34%.

34% Faster Workflow — Live on Vercel

WAREHOUSE DASHBOARD — ODATA V2 SYNC

30% Speedup

In Task Navigation via Custom Fiori Cards

02 // INVENTORY PRO

WAREHOUSE SAP

SAPUI5 • SAP FIORI • ODATA • SAP BTP

Redesigned warehouse picking and stock reconciliation workflows. Replaced 40+ dense spreadsheet rows with responsive visual KPI cards, cutting task navigation duration by 30%.

30% Nav Reduction — SAP BTP Deployed

SPRINT PLANNER — GEMINI API ACTIVE

+55% Velocity

Automated Task & Story Breakdown

RBAC AUTH · DRAG KANBAN

03 // PROFLOW SAAS

SAAS • AI

ANGULAR • NODE.JS • MONGODB • GEMINI API

Engineered a full-stack SaaS platform on the MEAN stack. Integrated Google Gemini API to automate user story breakdowns and sprint planning, boosting engineering team productivity by 55%.

+55% Team Velocity — JWT Multitenant

DEEP DIVE CASE STUDY

SAP PROGNOS: PREDICTIVE FORECASTING COCKPIT

Transforming fragmented manufacturing spreadsheets into an accessible decision cockpit using the 10-step design thinking methodology.

01 Problem & Friction

Supply chain planners operated across 4 disconnected Excel workbooks and CLI scripts. Discrepancies averaged 18% with weekly planning cycles taking 47 minutes per manufacturing line.

02 Persona: Vikram Sharma (38)

Lead Inventory Planner: Needs transparent model comparison (Prophet vs XGBoost) without reading raw Python scripts or dealing with unvalidated formula errors.

03 User Journey Optimization

STAGE 1 Ingest CSV → STAGE 2 Compare Curves → STAGE 3 1-Click ERP Sync

WIREFRAME → FIORI HORIZON DESIGN

Progressive Disclosure: Replaced 14 raw hyperparameters with 3 adaptive presets (Aggressive, Balanced, Conservative). Low-fi paper sketches proved split-screen comparative charting reduced context-switching errors by 41%.

Design Tokens: Enforced strict 4.5:1 WCAG 2.1 AA contrast ratios, 8px layout grid, and dark-mode telemetry palettes adhering to SAP Fiori 3.0 Horizon specifications.

• 34% FASTER WORKFLOW • LIVE ON VERCEL

METHODOLOGY

THE 6-STAGE HUMAN-CENTERED DESIGN WORKFLOW

How I transform ambiguous enterprise requirements into accessible, high-performance production components.

01
DISCOVER
Contextual inquiry, operational shadowing, friction mapping.
PROBLEM CANVAS

02
DEFINE
Behavioral user personas, empathy maps, journey friction analysis.
USER PERSONAS

03
IDEATE
Information architecture, progressive disclosure trees, task flows.
IA MAPS

04
WIREFRAME
Low-fi paper sketches to test spatial hierarchy before writing code.
LO-FI DECKS

05
DESIGN
Figma atomic libraries, 8px grid, WCAG 2.1 AA token scales.
DESIGN TOKENS

06
VALIDATE
Interactive React prototype, usability trials, task time measurement.
TASK TIME AUDIT

1. ZERO DESIGN DRIFT
By maintaining 1:1 parity between Figma variables and Tailwind CSS tokens, visual design integrity is strictly preserved during sprint implementation.

2. ACCESSIBILITY-FIRST
Every screen is validated for 4.5:1 text contrast in dark mode, clear keyboard focus rings, and touch-safe 44px minimum tap targets.

3. MEASURABLE EFFICIENCY
UX success is evaluated through reduced operational task duration, lower cognitive error rates, and clean navigation ergonomics.

ENGINEERING EXECUTION

TRANSLATING FIGMA DESIGNS INTO REACT 18 CODE

How component-driven engineering, synchronized design tokens, and GPU motion deliver 60 FPS performance.

01. Atomic Components

Structuring interfaces into Atoms (Buttons, Badges), Molecules (KPI Cards), and Organisms (Forecast Cockpit) with strict TypeScript prop contracts.

REACT 18 • TYPESCRIPT

02. Tokenized CSS

Figma color tokens map directly to Tailwind CSS variables (`--bg`, `--red`, `--line`), maintaining strict 8px layout rhythm.

TAILWIND CSS TOKENS

03. Responsive Fluidity

Fluid clamp typography (`clamp(44px, 10vw, 98px)`) and strict `overflow-x: clip` rules prevent horizontal layout breakage.

MOBILE TO 1440PX

04. 60 FPS Motion

Hardware-accelerated GPU transforms with Apple Expo Out easing. Touch devices gracefully disable tilt effects to respect battery life.

FRAMER MOTION

// PRODUCTION TYPE-SAFE TOKEN INTERFACE — src/lib/motion.ts

```ts
// Apple Expo Out Easing Curve
export const ease = [0.22, 1, 0.36, 1] as const;

export const fadeUp = {
  hidden: { opacity: 0, y: 24, filter: 'blur(6px)' },
  show: {
    opacity: 1,
    y: 0,
    filter: 'blur(0px)',
    transition: { duration: 0.8, ease }
  },
};

export const springTransition = {
  type: 'spring',
  stiffness: 350,
  damping: 25,
};
```

Ensures 60 FPS transitions without layout shifts.

EXPLORATION & SYSTEMS

ADDITIONAL SYSTEMS, INTERFACES & PROTOTYPES

Real-time emergency response platform, kinematic robotics simulator, and interactive micro-interaction lab.

GEOSPATIAL SOS PLATFORM — LIVE ALERTS

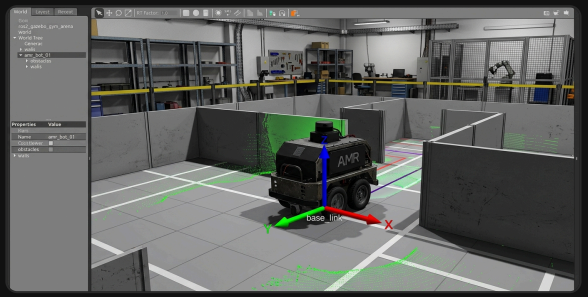

DisasterLink
Low-Bandwidth Crisis Response

NEXT.JS · POSTGRESQL

DISASTERLINK PLATFORM

Real-time platform connecting survivors, volunteers, and emergency authorities through SOS alerts, live geospatial mapping, and low-bandwidth communication protocols.

TYPESCRIPT • NEXT.JS

ROBOTICS TELEMETRY SIMULATOR

Tactical hardware simulation cockpit displaying real-time kinematic motor angles, battery drain telemetry, and camera diagnostics for physical prototypes.

HARDWARE HMI COCKPIT

PRODUCTION UI LAB — LIVE

Contextual Cursor & Slider
Live on Anand's Portfolio

Framer Motion • Lenis Smooth Scroll

INTERACTION LAB

Engineered agency-grade micro-interactions in the live portfolio: contextual follower cursor (VIEW, DRAG), draggable before/after transformation slider, and scroll progress lines.

LIVE IN PRODUCTION

CONNECTION & VERIFICATION

LET'S BUILD EXCEPTIONAL ENTERPRISE UI

Prepared for the Demandbase Campus Interview • Parul University Placement Drive 2026/2027.

STATEMENT OF INTEREST FOR DEMANDBASE

"Modern B2B marketing and sales intelligence platforms succeed based on how effortlessly users can extract insight from overwhelming data volumes. My background—unifying human-centered research, strict enterprise design systems like SAP Fiori, and production-grade React 18 / TypeScript code—directly aligns with Demandbase's vision of delivering best-in-class UI/UX. I am eager to contribute immediately to your frontend engineering team."
